

ISMAIL AKINWALE (SC CLEARED)

SENIOR BUSINESS ANALYST | REGULATED GOVERNMENT ENVIRONMENT | DIGITAL & DATA TRANSFORMATION

Tel: 07413002887 | Email: akinwaleismail@yahoo.com | LinkedIn: [linkedin.com/in/ismail-akinwale-mbcs-aa058833](https://www.linkedin.com/in/ismail-akinwale-mbcs-aa058833)

CONTRACT PROFILE

Senior Business Analyst with 9+ years' experience delivering complex digital and data transformation programmes across highly regulated UK government and consultancy environments. Strong track record in requirements engineering, user and stakeholder engagement, business case support, process analysis, delivery liaison, implementation planning and solution validation. Experienced in working across business, operational and technical teams to translate needs into clear delivery requirements, manage risks and dependencies, and maintain alignment through the delivery lifecycle. Effective workshop facilitator quickly builds understanding of complex environments and provides the analysis and clarity needed to support prioritisation, mobilisation and successful implementation.

CORE COMPETENCIES

- Requirements elicitation, analysis, documentation and traceability
- Business case development support, impact assessment and decision support
- Business-to-delivery liaison with architects, developers, data engineers and Scrum teams
- Implementation planning, business change, solution validation and testing support
- Business case input, options analysis and impact assessment
- User and stakeholder engagement across business, operational, technical, governance and security functions
- Requirements, scope and backlog prioritisation across delivery demands
- End-to-end process mapping (As-Is / To-Be), gap analysis and process optimization
- Risk, issue and dependency management in governance and compliance-driven environments
- Agile and Waterfall delivery | Jira | Confluence | User stories | Epics | GHERKIN | Wireframes

TOOLS & TECHNIQUES

- **Delivery & Documentation:** Jira, Confluence, Azure DevOps, Microsoft 365
- **Modelling & Design:** BPMN, UML, Use cases, User journeys, Wireframes and Prototypes, Visio, Miro
- **Requirements Techniques:** Epics and User stories, Acceptance criteria in Gherkin syntax, MoSCoW prioritisation, Backlog refinement
- **Data & Reporting:** SQL, Power BI, Data platform and Data Migration analysis
- **Automation & Cloud:** UiPath (RPA Business Analyst Foundation), AWS cloud fundamentals

PROFESSIONAL EXPERIENCE

His Majesty's Revenue & Customs (HMRC) - Telford: July 2022 – Present

Senior Business Analyst

CONTRACT

Deliver business analysis across large-scale data platforms and transformation programmes in a secure UK government environment supporting critical national services.

- Led end-to-end requirements definition for complex regulatory and data-governance initiatives, including GDPR deletion and retention, ensuring data platform meet statutory obligations and audit expectations.
- Conduct stakeholder interviews and facilitate workshops to build shared understanding of complex programme environments and align users and delivery teams on priorities and outcomes.
- Develop As-Is and To-Be process maps and gap analysis, identifying improvement opportunities and supporting prioritisation across multiple delivery streams.
- Mapped intricate data flows across enterprise data systems, producing clear as-is/to-be models, source-to-target mappings, and transformation rules for high-risk tax and income datasets.
- Defined eligibility logic, automated deletion rules, retention timers, housekeeping jobs and non-deletion reason handling to ensure compliant, transparent and fully auditable data-lifecycle management.
- Delivered impact assessments for cross-platform changes capturing RAID positions, downstream impacts and sequencing plans for Data Platform Services.
- Support programme mobilization and delivery readiness by ensuring requirements, processes, dependencies and expected outcomes are clearly defined.
- Lead solution validation through functional specification reviews and testing support, maintaining traceability between business needs and delivered solutions.
- Manage risks, issues and dependencies, escalating and supporting resolution within a highly regulated governance environment.

Accenture – Manchester: January 2021 – July 2022

Business Process Analyst

CONTRACT

Reduced average impacting duration from 50 days to 27 days within six months by standardising the impacting process, tightening QA controls, and improving supplier engagement, resulting in a 25% improvement in project delivery timelines and fewer customer cost queries.

- Worked across multiple Product-Oriented Delivery teams to analyse complex data change requests and translate them into clear, structured technical requirements that suppliers could impact accurately.
- Partnered with Architects, project teams, and suppliers to standardise the impacting process, ensuring clarity, completeness, and alignment before impacting commenced.
- Improved the quality assurance of incoming change requests by training DPS colleagues on how to assess clarity, completeness, and technical readiness, reducing rework and escalation.
- Facilitated walkthroughs, dependency sessions, and cross-team alignment meetings to ensure all impactors were identified early, and delivery risks, assumptions, and constraints were surfaced and owned.
- Reviewed supplier impact responses, consolidating multiple technical inputs into a single, coherent impact assessment while ensuring RAIDs, scope alignment, and cost accuracy.
- Identified bottlenecks across the end-to-end impacting workflow and co-designed practical process improvements that reduced delays, strengthened governance, and improved supplier SLA compliance.

Barclays – London: August 2019 – December 2020

Business Analyst

CONTRACT

Delivered an automated credit-limit decision workflow that reduced manual reviews by 40% and cut approval turnaround time from days to minutes, improving customer experience, strengthening risk control, and lowering operational cost.

- Partnered with credit risk, compliance and underwriting teams to understand current credit-limit decision workflows and identify bottlenecks in manual reviews.
- Mapped detailed As-Is and To-Be credit workflows, clarifying decision points, data dependencies and automation opportunities.
- Analysed historical credit-limit data, approval patterns and default trends to support the definition of new scoring rules and risk thresholds.
- Translated risk policies into clear BRDs, FSDs and Agile user stories, ensuring developers had unambiguous logic for automated credit-limit decisions.
- Designed and executed UAT scenarios with business users to validate automated decisions aligned with regulatory requirements and risk appetite.
- Collaborated with product owners, engineers and QA teams to refine backlog items, resolve defects and ensure end-to-end traceability of every business rule.

Octopus Energy – London: September 2018 – July 2019

Digital Business Analyst | Agile product delivery

CONTRACT

Improved first-time smart meter installation success by 25% within six months by analysing failure patterns, redesigning customer booking flows, and collaborating with field operations to implement targeted process improvements.

- Partnered with operations, product, and field teams to refine the end-to-end smart meter installation journey, removing friction points and improving customer experience.
- Analysed installation performance, customer feedback, and engineer data to identify root causes of delays, failed installs, and missed appointments.
- Translated business needs into clear user stories and process improvements that enhanced booking flows and customer communications.
- Supported delivery teams with dashboards, insights, and change-ready processes that improved operational efficiency and customer satisfaction.

Black Country Healthcare NHS Foundation Trust – West Bromwich: June 2017 – August 2018

Business Analyst

CONTRACT

Delivered a fully validated requirements and process-mapping pack that accelerated the Trust's EPR procurement decision by 30%, reducing ambiguity, strengthening clinical confidence in the solution, and enabling a smoother transition away from paper-based pathways.

- Worked closely with clinical, operational and digital teams to capture clear, actionable requirements for the Trust's new Electronic Patient Record (EPR) system.
- Facilitated workshops across clinical, operational and corporate services to baseline current processes and co-design future digital workflows.
- Produced high-quality analysis outputs including end-to-end process maps, gap analyses, requirements documentation and procurement-ready specifications.
- Supported the procurement lifecycle by developing evaluation criteria, aligning requirements with programme priorities, and ensuring documentation meet NHS governance standards.

- Collaborated with system configuration specialists to ensure the new EPR design reflected real clinical needs and delivered measurable improvements in safety, efficiency and patient experience.
- Worked with programme and project managers to identify policy, process and workflow changes required for successful transition from paper-based to digital pathways.

CORE TECHNICAL SKILLS

Business Analysis & Requirements Engineering | Stakeholder Engagement | Process Mapping | Workshop Facilitation | Business Change | Business Case Development Support | Solution Design & Validation | Agile & Waterfall Delivery | Risk, Issue & Dependency Management | Data Analysis & Insight Generation | Governance, Compliance & Regulatory Environments | Jira | Confluence
